

EoP Biodiversity Process

Do this monthly process for land you own, land you rent, land you are responsible for maintaining.

You can even participate if you live in a condo and have no outdoor space.

Important: *Focus on your own biosphere.*

Don't intrude on your neighbor or your neighboring community or another country. Stick to what's in your direct care.

Do this process monthly,
on the first day of every month.

For this, you will need Essence of Perelandra (EoP), a clean spoon and about 5 minutes.

1. Focus your attention on your environment and state: *"I wish to set up with nature to shift Essence of Perelandra to my personal environment to provide the strength and support needed to counter and reverse climate change stress and the resulting loss and extinction of its biodiversity."* Wait 10 seconds.
2. Describe your land succinctly. Say it aloud. (For instance, you can use your home address, focus on a sketch of your land/yard/balcony, garden, pond, room/apartment, forest or farm, or use a copy of your plat. Keep a copy of your description to easily reference each month.)
3. Place 10 drops of Essence of Perelandra in a clean spoon. Hold the spoon out in front of you and say, *"I wish to shift these Essence of Perelandra drops to the location I've described to provide the strength and support needed for reversing the impact of climate change and the resulting loss and extinction of its biodiversity."* Continue to hold the spoon out in front of you for 10 seconds. The shift occurs automatically.
4. After 10 seconds, the shift is complete and you are finished. (Nature did the shift for you, so you might want to give a tip of the hat to nature and thank it before moving on with the rest your day!)
5. Wipe the spoon clean and you're done — until the first day of the next month!

Multiplying the Power of the Individual

On May 6, 2019, the U.N. released a comprehensive assessment of our planet's ecosystem and dwindling biodiversity. One million animal and plant species are now threatened with extinction, many within decades, more than ever before in human history. *One million species.*

Machaelle thought about what Perelandra could add to address this unimaginable devastation of wildlife and biodiversity on a broader scale, and work in concert with you — the people using these tools.

The answer: *There is a way to expand our individual environmental work on our lands. We can work together to release nature's strength and stability that will counter the damaging momentum of plant and wildlife extinction.*

Let's Team Up With EoP

On the first day of every month, join us in doing one small but hugely impactful thing to support plant and wildlife diversity. To do this, work with Essence of Perelandra (EoP), using the steps given on this card. It will take less than five minutes of your time, once a month.

Essence of Perelandra (EoP) strengthens and stabilizes an environment by providing the singular and powerful balance of the Perelandra garden. With EoP, Machaelle and nature gave each of us the ability to extend that powerful balance beyond the Perelandra biosphere to our own homes and environment. It's no small thing.

On the same day, we will all shift EoP to our respective "little" environment with a focus on strengthening and supporting its plant and wildlife biodiversity. See the back of this card for the steps.
